SUMMARY

Senior Software Engineer with **9 years** of experience owning and scaling **data-driven** applications, and **analytics platforms**. Specialized in **high-performance data driven systems**, large-scale data processing, and application architecture. Increased team velocity and accuracy while serving as **SCRUM master**. Proven track record of **improving system speed**, building **clean frontend layouts**, designing normalized & efficient **relational architecture**, and planning **full-stack** systems. Known for driving **platform-wide design pattern** improvements, and optimizing at scale.

SKILLS

- **Programming Languages:** JavaScript, Typescript, SQL, Java, HTML5, CSS3, PHP, Python
- **Front-End Technologies:** Vue.js, React, Nuxt, Pinia, Tailwind, Sass, Material Design, Bootstrap
- **Back-End Development:** REST APIs, Django, Laravel, PHP, Javascript
- **Database Management:** MySQL, SQL Server, PostgreSQL, Relational Data Modeling, ORMs, Normalization
- **Development Tools:** git, GitHub, GitLab, Docker, Nginx
- **Specialized Skills:** SCRUM leadership, AI-assisted development, Behavior Driven Development, Agile & Scrum Practices, Data Visualization Tools, Design Patterns, Data Analytics, Object Oriented Design, Software development lifecycle, Project management
- **Cloud Skills:** Amazon Web Services, Google Cloud Platform, OAuth Integration, Lightsail, S3, Route 53, EC2, IAM Permissions, Cost Optimization,

PROFESSIONAL EXPERIENCE

Full Stack Developer, MeasuringU

March 2021-August 2026

- Architected a multi-service, **event-driven AI orchestration** platform (Go API, Python workers, Redis Streams, WebSockets, DynamoDB/PostgreSQL on AWS) built around a three-gate workflow with human approval checkpoints and claim-check messaging, turning ambiguous requests into scoped, production-ready web applications and cutting planning from ~4 days to ~1 day.
- Served as **Scrum Master** for a 7-person engineering team, partnering with product stakeholders to clarify requirements and scope work realistically; improved requirements clarity, AI-workflow, and raised velocity by 50%.
- Designed an extensible, **event-driven agentic** development platform integrating LLMs, MCP integrations, and agent skills with the Cursor SDK; defined service contracts across Python microservices using OpenAPI and AsyncAPI.
- Recognized as team expert in database design; designed normalized relational schemas and executed optimizations, improving load times 3–5x while enforcing data integrity.
- Built interactive analytics dashboards processing **1M+ data points** using an object-oriented, ports and adapters architecture in PHP & Vue.js.
- Led a **platform-wide frontend redesign** using Vue.js, Sass, Pinia, and Material Design, overhauling frontend architecture & UX.
- Maintained CI/CD pipelines with GitHub Actions to automate testing, linting, builds, and deployments to AWS, enabling low-risk, and fast releases across multiple instances.

Data Science Developer, Mountain Data Group

May 2019-March 2021

Processed and modeled massive datasets to improve predictive accuracy and analytical insights for research teams.

- **Promoted** from Software Developer Intern to Data Science Developer, contributing to advanced analytics and **predictive modeling** initiatives.
- Specialized in **data engineering** skills on a small team with big data features, relying on rock solid data integrity, and performant dashboards which lean on extensive data aggregations and time series data.
- Conducted exploratory research to evaluate new dataset reliability, correlation, and completeness including **GIS**, demographic, violent crime, and census data.
- Integrated large external datasets (census, weather, violent crime) into **statistical models**, improving predictive accuracy and meaningful depth of analysis.
- Leveraged Python's data analytics stack to process and analyze scientific **datasets exceeding 1 billion records**, extracting actionable insights at scale.
- Automated data ingestion and update pipelines, **reducing downtime to near zero**, and improving slow query **performance by up to 100X**.
- Developed **time-series and big-data models** supporting academic research in travel risk analysis, dangerous lead exposure, and assessing/quantifying public trust.
- Performed **data visualization programming** with GIS tools, **D3**, and **Python** data visualization libraries, supporting spatial analysis and visual reporting systems.
- Worked with Azure ecosystem to integrate with third party client micro service systems.

Web Application Developer, Environmental Health Services at CSU

May 2017-May 2019

Built custom web tools for public health and environmental risk management used by multiple university departments.

- Created **custom web applications** for Environmental Health, Public Health, and Risk Management departments supporting internal administrative data workflows.
- Planned and implemented APIs, databases, and interactive dashboards, **supporting 10-15 CSU department administrators**.
- Led development of **data-driven applications** for drone tracking, public health logging, ergonomics assessments, and international travel risk management.
- Translated non-technical stakeholder requirements into scalable technical solutions and workflows.
- Collaborated on team projects using **pair programming** and **Agile practices**, leading to an efficient and flexible team.
- Applied **SOLID principles**, and **object-oriented design patterns** to produce extensible, and maintainable systems.

EDUCATION

Bachelor of Science in Computer Science, Colorado State University, Fort Collins, CO

December 2019

Bachelor of Arts in Sociology, Fort Lewis College, Durango, CO

May 2013
